10 occupations in high demand
CareerBuilder commits to Clinton Global Initiative to help unemployed workers find jobs
By Hope Gurion, chief development officer at CareerBuilder

As the unemployment rate hovers at 8.2 percent, job seekers -- especially those who have faced long-term unemployment -- may be thinking the jobs just aren't there. Yet jobs are available, and some companies are even struggling to fill positions. A recent CareerBuilder survey found that nearly two in four hiring managers say they have open positions for which they cannot find qualified candidates.

Yet much of today's economic news focuses on the lack of jobs, so job seekers may not know where to turn for information on fields that are experiencing a hiring surge. Or they may not think they have the right skills to pursue a career in one of the growing fields.

That's why programs such as the Clinton Global Initiative are making an impact. Established in 2005 by President Bill Clinton, the CGI convenes global leaders to devise and implement innovative solutions to some of the world's most pressing challenges -- including unemployment.

Connecting job seekers with jobs
CareerBuilder has made a major commitment to the CGI with the goal of providing current and future workers with information and new skills. CareerBuilder's commitment provides CareerOneStop centers, sponsored by the Labor Department, with CareerBuilder's Supply & Demand data. The S&D data enable CareerBuilder to help job seekers discover occupations that are in high demand and hone their skills for areas with great growth opportunities.

Using the S&D data, CareerBuilder has compiled lists of the top occupations with the most demand and least supply in each center's local area. The lists will be sent to the centers in the top 20 cities with the highest number of unemployed workers.

Using the same S&D data, here is a list of 10 of the most in-demand occupations nationwide, all with strong growth and earning potential:

1. Computer specialists
Most common job titles: Project manager (information technology), Java developer, Web developer, .NET developer, SharePoint developer, PHP developer
